TIMER, VIBRATION, D. 25X1

Dear Art,

Enclosed are the following five (5) documents:

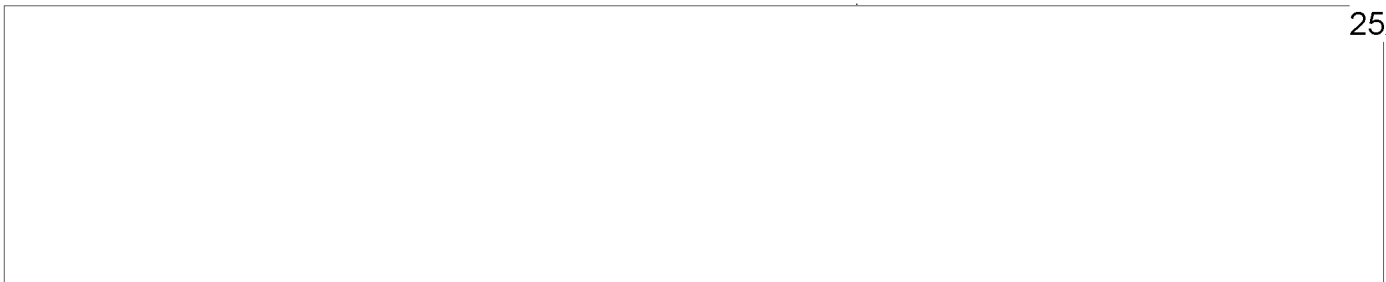

- 1 - Requirements for Nuclear Timer
- 2 - MIL-STD-303 Transportation Vibration Testing Specification
- 3 - Vendor's Data Sheet for Vibration Testing Machine
- 4 - Coupling Base Drawing PG 4-Jan-D-268
- 5 - Evaluation Report for Electric Blasting Cap Investigation

These data should aid you in preparing a proposal for future development. The coupling base drawing and blasting cap evaluation report will probably be of little use since a special coupling base is being considered. No information is available for the special coupling base, as we discussed. However, the contractor is investigating this concept and all necessary information will be forwarded to you. If you have any questions or wish to discuss any of the enclosed material, please let me know. The requirements as stated are tentative and may be revised in areas of technical difficulty as we proceed.

Enclosures: As Stated Above

Lorne
